The Carbon Fibre Swimmer Pole is the preferred choice for Special Forces Counter Terrorism operations within a variety of militaries.

The swimmer pole is carried by divers who position themselves in the water directly beneath the side of the vessel to be boarded. At this stage it is fully telescoped (shortest length) and is held horizontally on the surface of the water by divers at each end.

The pole is then turned to a vertical position with the top just clear of the water and the rest of the pole extending down below the surface. The grapnel is slotted into the hook spigot at the top of the pole and the rope or scaling ladder attached to the grapnel with a carabiner.

The pole is slowly raised and extended by first loosening and then tightening in sequence the locking collars until the pole is in its fully extended or intermediate position as desired. This will enable divers to secure the grapnel to the target. The pole is then withdrawn and lowered leaving the grapnel securely in place with the rope or scaling ladder hanging from it and ready for use.

Carbon Fibre Poles

Details

5m Black Carbon Fibre Swimmer Pole
(extending to 15m) complete and with spare hook spigot, butt section locking collar and midsection locking collar.

3m Black Carbon Fibre Swimmer Pole
(extending to 9m) complete with spare hook spigot, butt section locking collar and midsection locking collar.

3m Carbon Fibre Pole

Order Code TO1600

5m Carbon Fibre Pole

Order Code TO1601
